

# Mobile 3D Reconstruction

“Turn your smartphone into an interactive 3D scanner!”

# Astrivis

Innovative ETH spin-off  
based in Zurich

Developing software solutions  
for mobile 3D scanning

Company founded in March 2016

Over 10 years of experience in  
3D Computer Vision

ASTRIVIS

Spinoff **ETH** zürich

# Why a Mobile 3D Scanning Solution?

- It's an easy and efficient way to acquire 3D
- No need for expensive hardware
- No dedicated scan operator required
- Democratizing 3D scanning

# Construction / Inspection

## Construction

- Renovation planning / visualization
- Extract measurements after the fact
- Current state vs. planned state (BIM)

## Inspection

- Degradation monitoring
- 3D Documentation

# Health Care

Point Cloud

Colored Point Cloud

Insoles

## Treatment

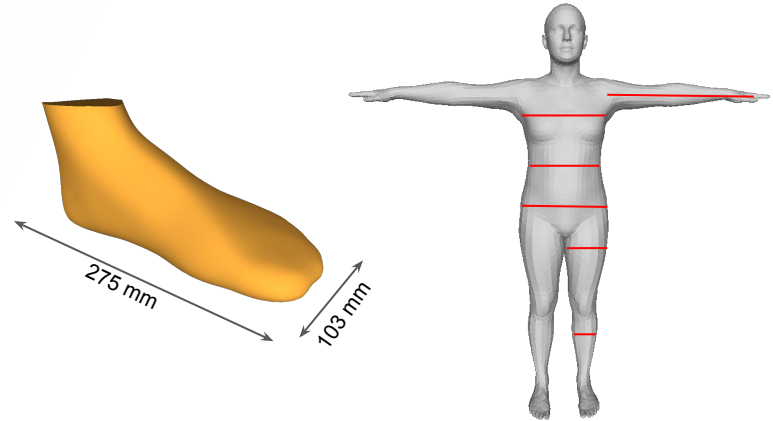

- Preview outcome of medical therapy
- Monitoring of healing process

## Planning

## Custom Orthotics

- Custom medical insoles
- Custom medical stockings

# eCommerce

## 3D Visualization of Products

- Enhanced customer experience (3D/AR/VR)
- Online inspection of second hand products

## Digital Twin

- Provide correctly sized product
- Reduce return rates

# Industries

Construction / Inspection

Health-care

eCommerce

3D Printing

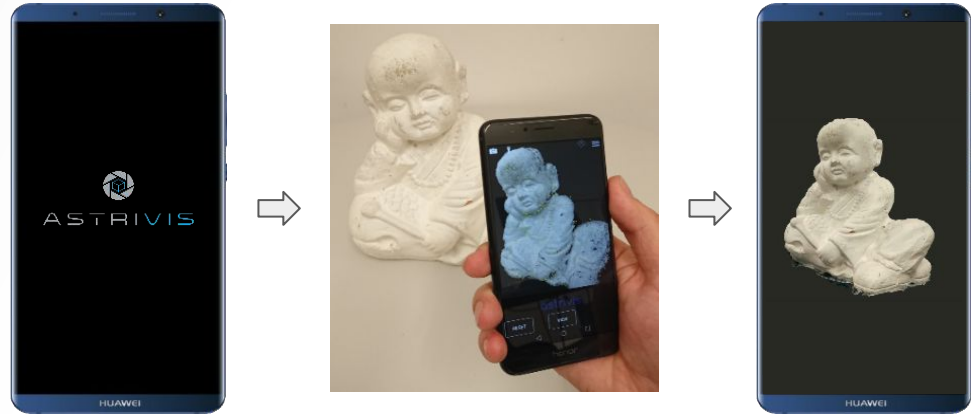

Digital Assets  
(AR / VR / Gaming)

# Scan with **your Phone**

Our software stack turns any Smartphone into a 3D Scanner

The solution is:

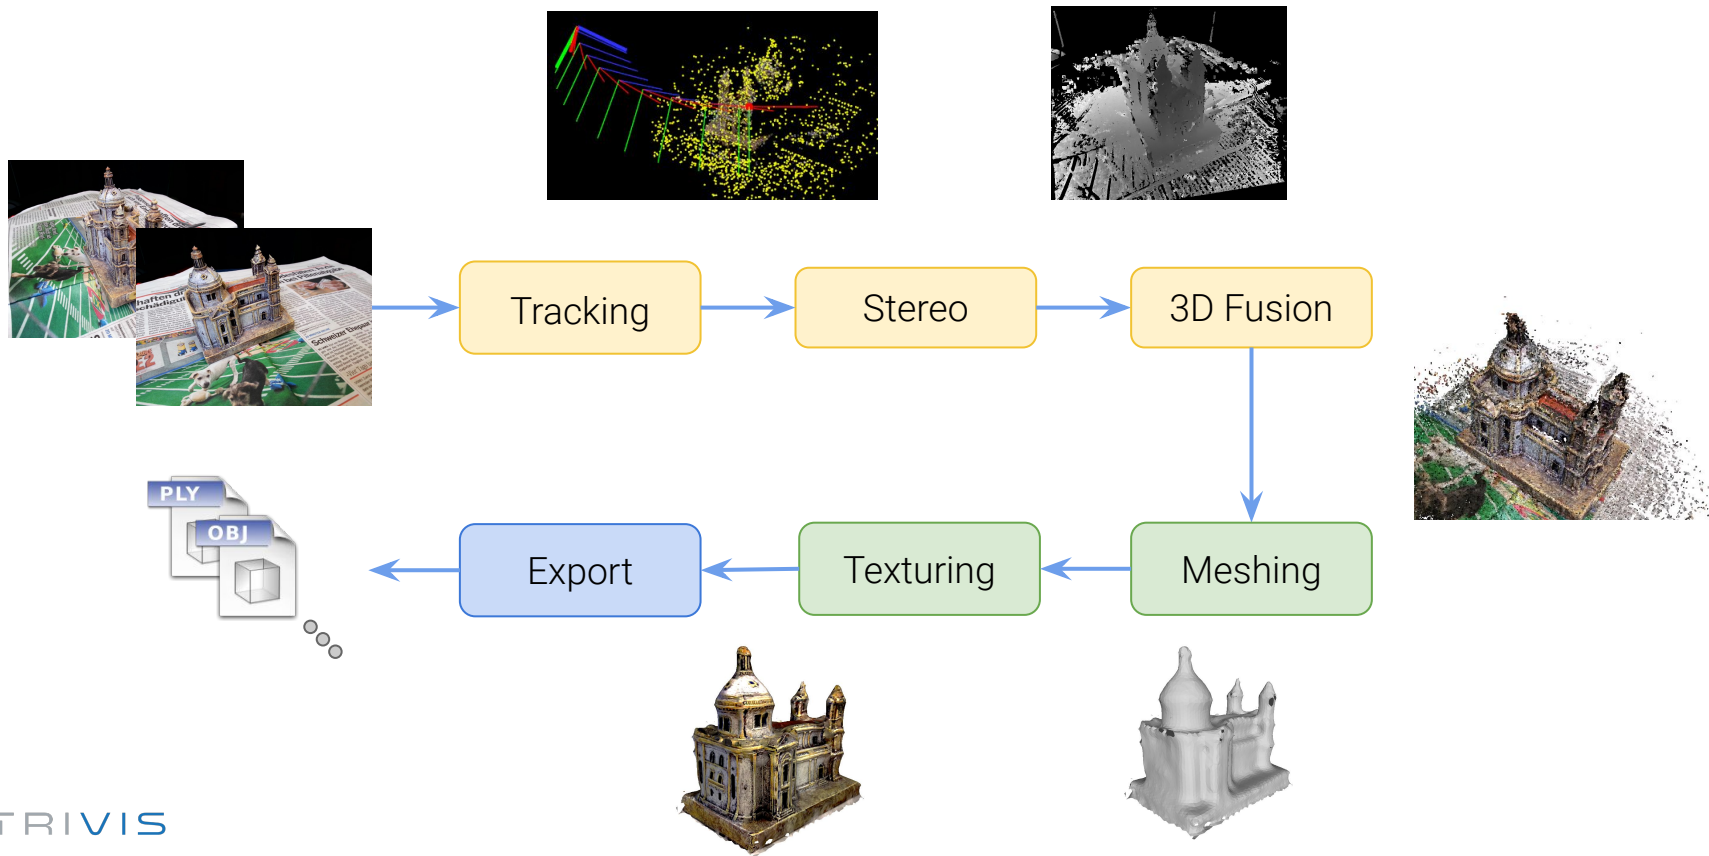

- 100% Mobile
- 100% Software
- Real-time
- Hardware agnostic  
(iOS, Android, Windows, Mac, Linux)

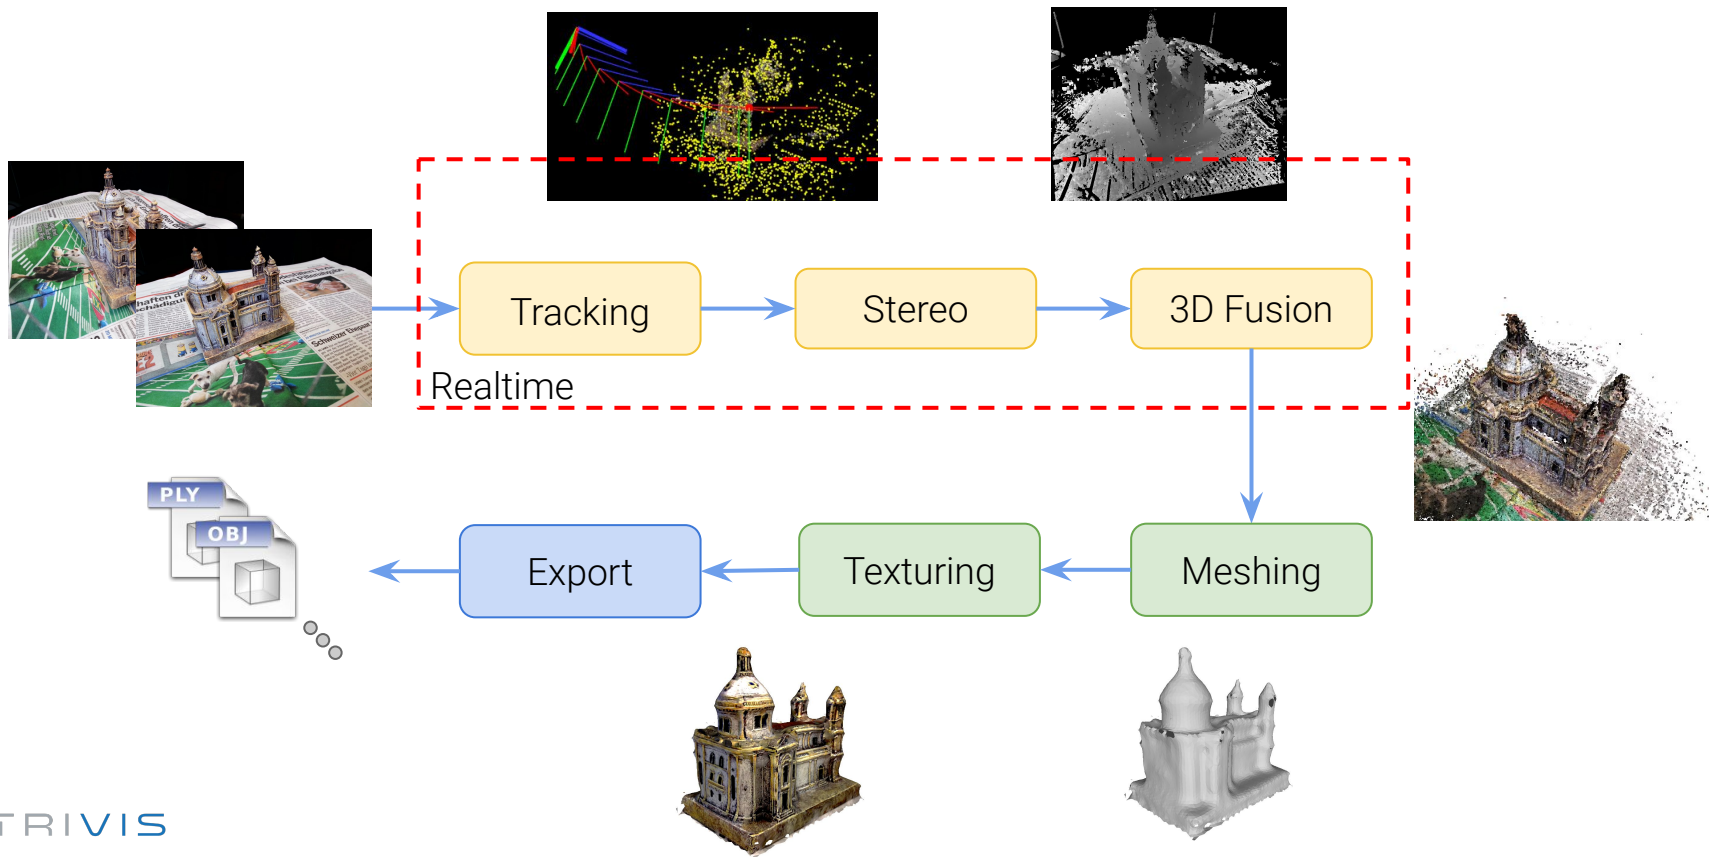

**You**Tube

# Mobile Photogrammetry

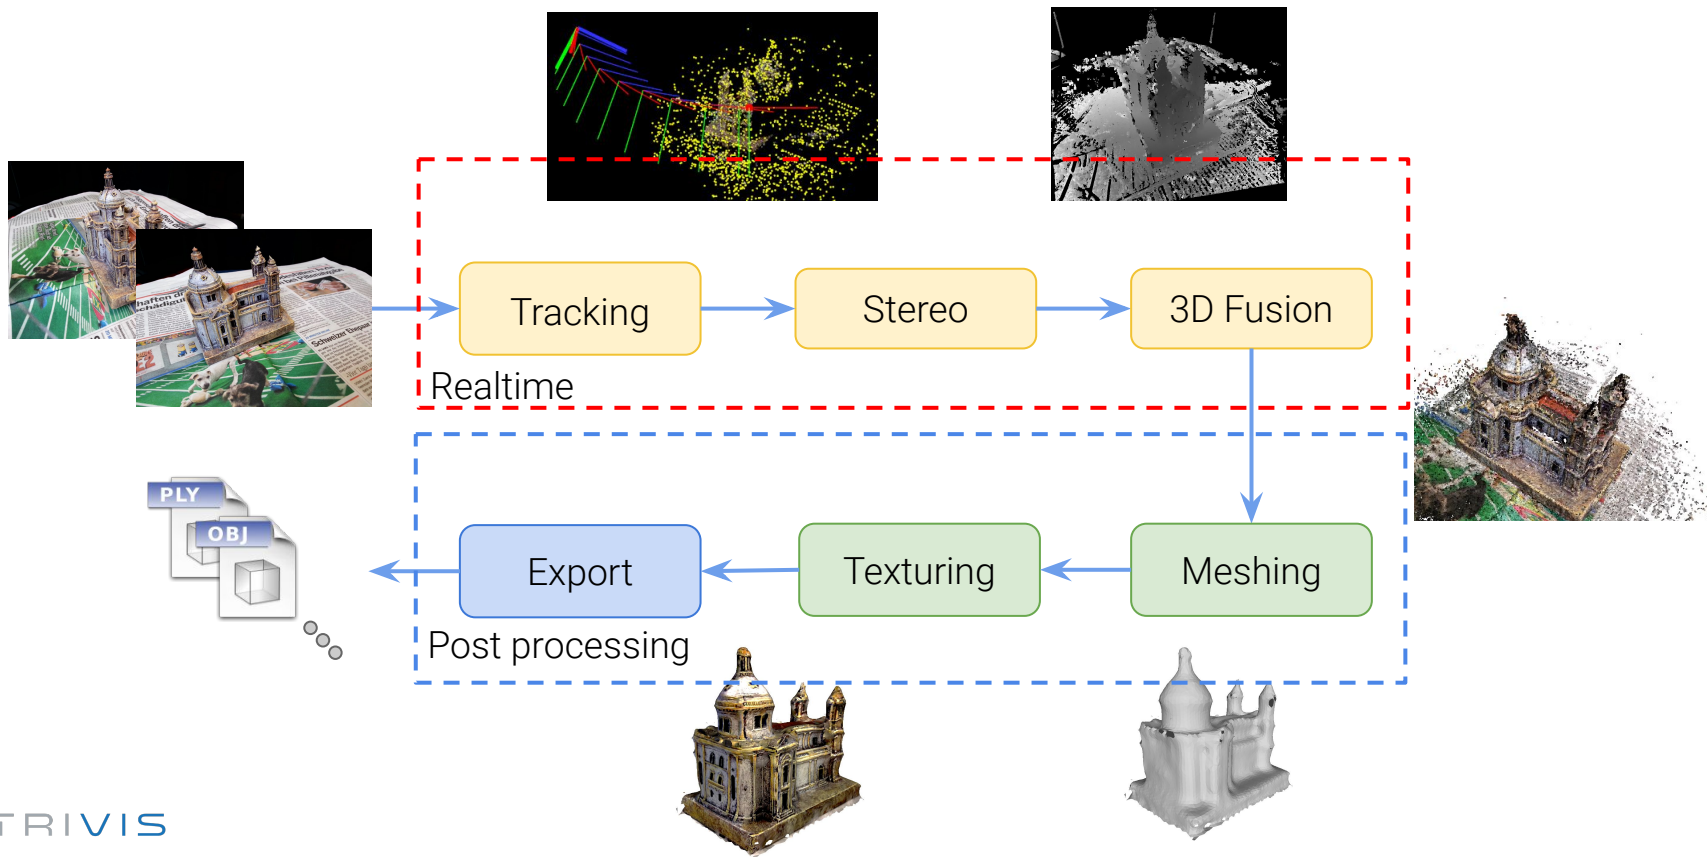

# Mobile Photogrammetry

# Mobile Photogrammetry

# Pipeline: 6DoF Tracking

Images are streamed with 30Hz from camera

Estimate camera pose for each image

Automatically select Keyframes for Stereo computation

Keyframe 1

Keyframe 2

# Pipeline: Stereo

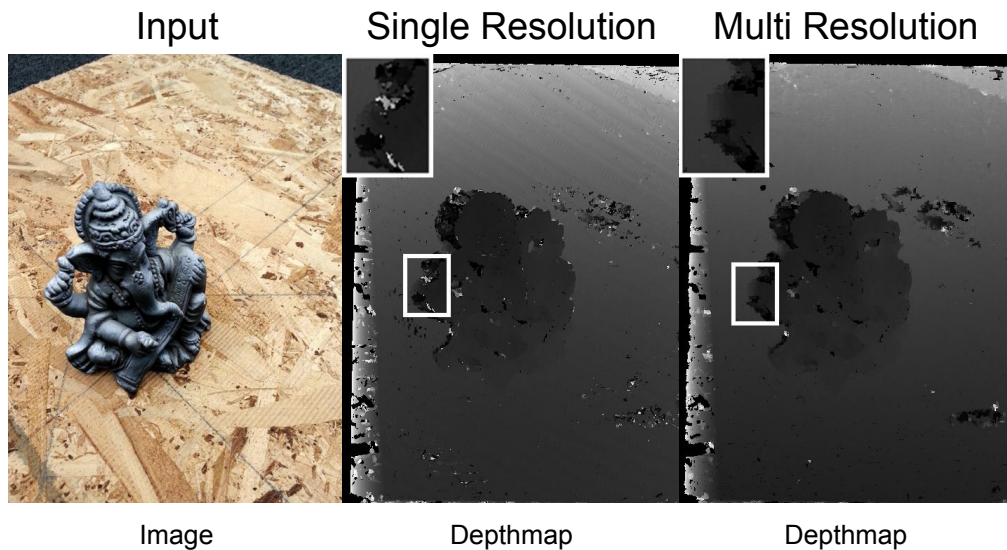

Find pixel correspondences  
between keyframes

MVMR Stereo (temporal)  
(Multi-View-Multi-Resolution)

Depthmap regularization

Processing: 2 Hz / depthmap

# Pipeline: Fusion

Fuse depthmaps into one Point-Cloud

Each point is represented by  
Position, Normal and Color

Spatially unbound reconstruction

Confidence-based 3D Point-Cloud Fusion

Confidence  
(Quality)

# Pipeline: Meshing

Convert point-cloud into a mesh

Implicit surface reconstruction

Fill holes & cleanup mesh

Point Cloud

Mesh

# Pipeline: Texturing

Project all images onto the mesh to create the final model

Seam blending

Global light correction

Mesh

Textured Mesh

# Photogrammetry at all Scales

< 0.05 m

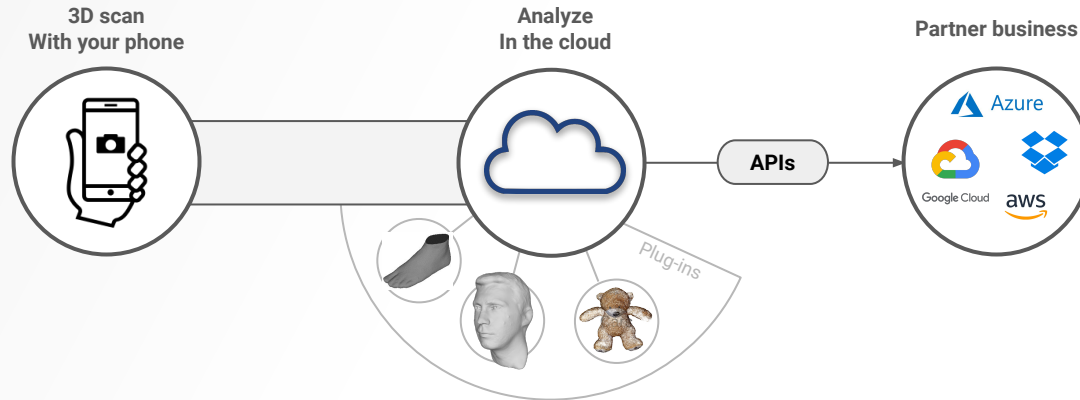

> 0.25 m

> 1 m

> 100 m

# Astrivis' Solution

We provide a unified ecosystem for scanning and data analysis.

# Thank you!
